

Plexaderm Reviews (By- Derm Review)

When you look at the infomercials for Plexaderm, the results look dramatic. Puffy under eye bags seems to disappear and fine lines and crow's feet seem to vanish. It seems like surgery in a bottle. According to the brand's own clinical study of 40 people, conducted in 2017, 75% saw a decrease in the appearance of under eye bags, and 78% saw a decrease in under eye dark circles. The customer reviews are overwhelmingly glowing, with users giving it 4.4 out of 5 stars. Customer feedback ranges from "Really works. Just wish it came in different shades," to "It rids these brutal bags under my eyes .I have travel bags, I don't need them under my eyes." Some people say the product has become one of their staples; "Omg.. my eyes look great. I couldn't be more happy!! What a fabulous product. I workout live without it!!"

But take a closer look at reviews on Amazon and you'll see that as with many products, the reviews are mixed. Plexaderm currently has a 2.5 star rating on Amazon from 634 customer reviews. 54% of the reviewers give it a 1 star rating while only 20% give it a 5 star review.

Many reviewers say they were drawn to the product after seeing the dramatic infomercials. The positive reviews claim that the product reduced their puffy eye bags and eye wrinkles, and some people raved that Plexaderm took 10-20 years off their face. These fans don't just like it- they love it. "I have had large bags under my eyes for over 30 years, about 3-4 minutes after I used it for the first time I couldn't believe how great it worked! Almost completely gone! Incredible! If I hadn't used it myself I would not believe it worked so incredible!," writes one reviewer.

But the vast majority of the reviews say that the product did not work at all, or if it did work, the results lasted anywhere from two minutes to two to three hours. As one reviewer wrote, "I was so excited to try this product. I had heard good results. It did work for about 2 minutes. Then my underbags returned. Bummer. I was hopeful." Many users expressed disappointment. "I should've read these reviews first. My complaints are exactly the same as everyone else's. On the infomercial they said you could use moisturizer afterward, but you can't. I would have done just as well if I bought some Elmer's Glue and applied it to my skin. And it would have been a lot cheaper. I should've known it was too good to be true."

Some users said in order to maintain that tightening look, you cannot move your eyes or your face. Many customers complained that the product left a white residue on their eyes, while others said it caused irritation and stinging. There are also many complaints about the dispenser clogging, and it can be difficult to put makeup on the skin after the film is in place.

Based on the Amazon reviews, it seems that the vast majority of people using Plexaderm were disappointed with the product. But when it comes to evaluating whether or not a product "works," keep in mind that what works for one person and their skin type may not work for someone else. Factors such as oily skin and sweating can also reduce the effectiveness of a product such as Plexaderm. That's why when it comes to find the right skincare regimen for yourself, there is always a bit of trial and error before finding what works for you.
